

# SAINTCON

## OFFICIAL MINIBADGE

Assembly Guide 2025

This guide provides assembly instructions and guides for all SAINTCON MiniBadges.

v1.0 October 19, 2025

**RARITY:** This term is a little subjective, but is based on the following general guidelines:

500+ Available - Very Common  
300 - 500 Available - Common  
200 - 300 Available - Uncommon  
100 - 200 Available - Rare  
100 or fewer - Super Rare  
10 or fewer - Not Included

**DIFFICULTY:** This is the basic definition of assembly difficulty:

**BEGINNER:** Generally uses large components, and with some basic soldering skills, this badge should be simple to assemble for most people.

**INTERMEDIATE:** Badges with this rating should not scare you away from assembling them. They get this rating when they use smaller components that might require a little more attention or steady hand to assemble. This could also indicate some level of complexity.

**ADVANCED:** Badges with this rating are generally for those with more refined soldering skills. Components are generally small and require a very steady and nimble hand to solder manually. We still encourage you to try. Using solder-paste and an oven can make this easier.

**TYPES:** We have done our best to compile in this guide an assembly guide for all known Minibadges.

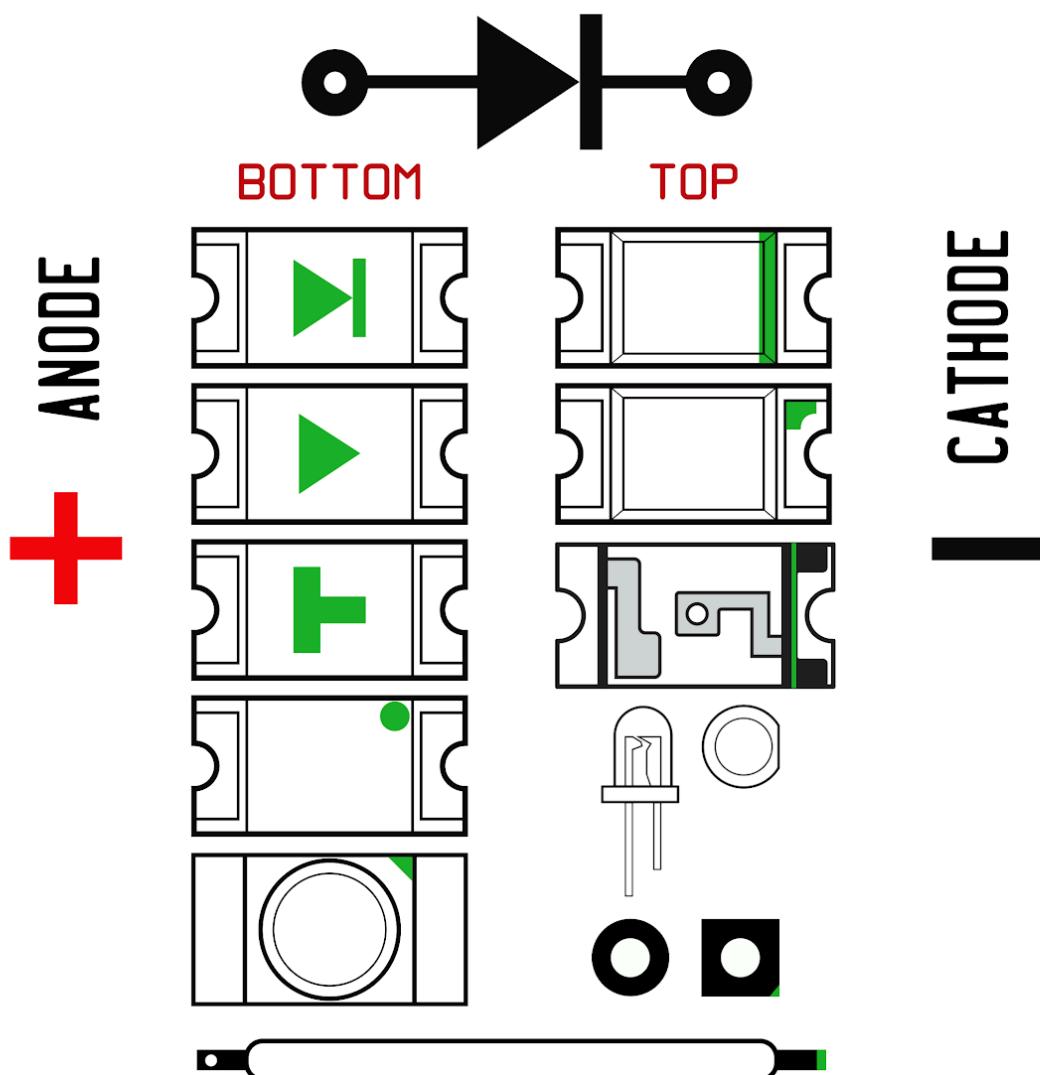

These badges fall into the following categories:

**OFFICIAL:** Badges designed specifically for the conference, and are acquired as part of the efforts to participate and explore what the conference has to offer.

**SPONSOR:** Badges designed by/for our proud sponsors. We are excited to see more sponsor minibadges than ever before.

**PERSONAL:** Many minibadge creators are super proud of their works, and are bringing badges to the conference for trading or to use for networking with people. These are not supported directly by the conference, but are featured here for convenience and assembly help.

# LED ORIENTATION GUIDE

**HAND SOLDERING:****NEVER SOLDER SMD COMPONENTS ABOVE 350°C.****SOLDERING ABOVE THIS TEMPERATURE WILL CAUSE DAMAGE!**

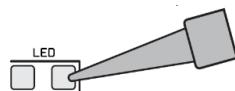

When hand-soldering Surface Mount Devices (SMD), the easiest method is to solder one-pad at a time, and it's called the Single-Pad Soldering Method.

Here's how it works:

**SINGLE-PAD  
SOLDERING  
METHOD**

Regardless of how many contacts there are, it is important to only ever add solder to ONE PAD until the component is attached to the board. For example, with a standard LED here is how you would complete this process:

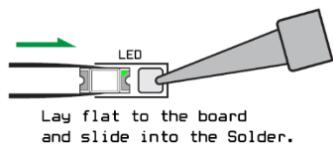

1. Use the soldering-iron to heat up and add a SMALL dab of solder to one side of the attachment pads

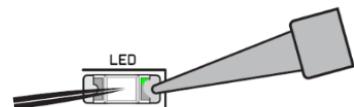

2. Use tweezers to carefully hold the LED with one side of the exposed contacts sticking out. For LEDs be sure to use the right orientation to avoid attaching the component backwards.

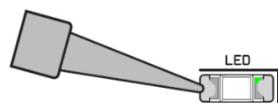

3. Re-Heat the solder placed on the single-pad with the iron, and carefully slide one side of the LED component into the molten solder.

4. Remove the heat, and allow the component to connect to the board. Once attached, use tweezers to gently rest on the top of the LED, and reheat the solder one last time. This will allow the component to settle flat to the board.

5. Once attached and flat to the board, use the iron to add a SMALL dab of solder to the other side of the LED to complete the attachment. Very little solder is needed.

## ALL OFFICIAL MINIBADGES

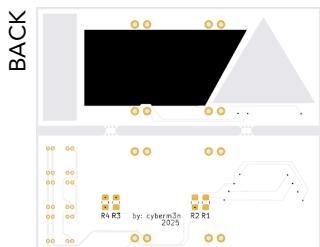

The following badges are contributed by various minibadge creators and are included here for reference. Any issues with these badges should be referred to the creator.

### Arctic Wolf Base

Designed By: cyberm3n

This a triple wide triple board single badge, that underwent a last minute reversion. This badge will also be used to display 3 of the 4 AW Micro Badges that can be collected.

DIFFICULTY:

**INTERMEDIATE**

RARITY:

**COMMON**

HOW DO I GET ONE?

Stop by the Arctic Wolf booth.  
Find an Arctic Wolf employee to  
trade/exchange with

### ASSEMBLY INSTRUCTIONS:

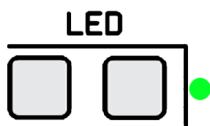

Detailed instruction can be found at: [https://github.com/cyberm3n-org/SC\\_2025/arctic\\_wolf](https://github.com/cyberm3n-org/SC_2025/arctic_wolf)

#### General Instructions:

1. Separate the boards
2. Solder LEDs to front of bottom board
3. Solder Resistors to back of bottom board
4. Solder PINs to the bottom board
5. [OPTIONAL] Thin layer of hot glue over LEDs to help diffuse the light
6. Solder the Top board to the PINs of the bottom board
7. [OPTIONAL] Solder LEDs and Resistors to Wolf Head
8. Solder Wolf Head to the front of the top board

### Protect your "Pie"

Designed By: Firebolt Services / hollyhacker

This MiniBadge was inspired by Varonis and their mission to safeguard sensitive data—your PII (Personally Identifiable Information). Playing on the homonym "PII" and "pie," the badge features a golden lattice pie as a lighthearted reminder that your data, like a good pie, deserves to be protected from prying hands.

DIFFICULTY:

RARITY:

**SUPER RARE**

### ASSEMBLY INSTRUCTIONS:

BT1 – Battery Holder: Solder the battery holder in place. It has four legs, which should be bridged together on each side  
D1, D2, D3 - Red LEDs: green corner mark on the led goes "in" the square marking  
R1, R2, R3 - Solder each resistor in its matching position next to the LEDs. Orientation doesn't matter for resistors (numbers face out so they can be read)  
Switch - The on/off switch is located in the box on the right side of the PCB. Solder all six legs separately, ensuring that no solder bridges between them—each leg must remain electrically isolated for proper switching function.

# COMMUNITY MINIBADGE

## Tamper Evident Community MiniBadge

Designed By: Jup1t3r

If a container or object is "Tamper Evident" it is designed to make it obvious if someone has opened or modified it. Tamper evident seals and devices we rely on are like any other security control, they have vulnerabilities. The Tamper Evident community is all about bypassing these security devices without leaving any physical proof behind. This involves using heat, chemicals, brute force, and a keen eye for imperfections.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

### 2025 HHC Minibadge

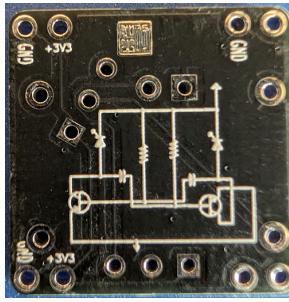

Designed By: RuShan

This is an update from last year's HHC minibadge now with schematic silk image on bottom of minibadge and new SAINTCON logo to light up. It features the learning alternating transistor circuit to blink two LEDs in quick precession to light up the top PCB design. This is a two PCB minibadge and has a mix of through hole and SMD parts for beginners to learn how to solder a more complex circuit.

### ASSEMBLY INSTRUCTIONS:

Silkscreen is accurate

BOARD/LED TYPE:

PARTS USED:

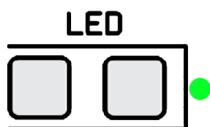

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

- Solder the D1 and D2 amber LEDs upside down (so the LEDs shine through the holes toward the front), with the cathode toward the top of the mini-badge, using the single-pad method for hand soldering.
- Solder the R1 & R2 resistors (1K ohm, labelled "1001"), using the single-pad method for hand soldering.
- Solder the R3 resistor (10K ohm, labelled "103"), using the single-pad method for hand soldering.
- Solder the C1 capacitor, using the single-pad method for hand soldering.
- Solder the 4x 2-Position headers.

## BOARD/LED TYPE:

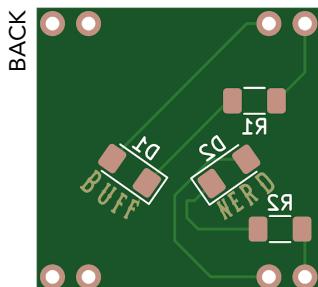

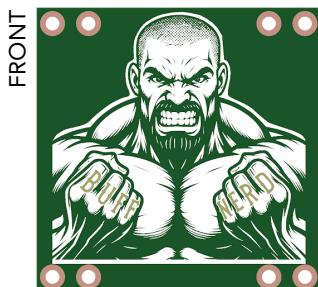

## PARTS USED:

- (x2) LED Amber 0805 SMD - <https://www.digikey.com/short/53c5z9p3>
- (x2) Resistor 1K 1/8W 0805 - <https://www.digikey.com/short/0t4db1z4>
- (x1) Resistor 10K 5% 1/8W 0805 - <https://www.digikey.com/short/z28z9rn9>
- (x1) Capacitor 22UF 4V X6S 0805 - <https://www.digikey.com/short/jr5h088t>
- (x2) Connector Header THT 4 position 0.100" (2.54mm) - <https://www.digikey.com/short/zt2j39r4>

## BOARD HOUSE USED:

JLCPCB

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

- Solder each resistor to R1 & R2
- Solder each LED to D1 & D2
- Consider side mounting the LED to shine brighter through the text cutouts on his knuckles

## BUFFNERD

Designed By: BUFFNERD

This minibadge is a mixture of myself and my favorite comic book character (HULK). BUFFNERD describes how not only do I love to play sports and lift, but I also am a massive nerd

## Tesseract

Designed By: BUFFNERD & Minus

The most powerful cube in the universe now in the palm of your hand

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Trade with either of us

RARITY:

**SUPER RARE**

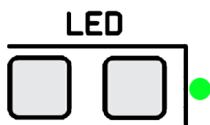

## ASSEMBLY INSTRUCTIONS:

- Solder a resistor to R1 & R2
- Solder a LED to D1 & D2
- Consider hot gluing over the LEDs to defuse the light (make sure not to get glue too close to the edge of the PCB)
- Solder to header pins - **MAKE SURE LEDs ARE ON TOP**
- Attach 3D printed cube by aligning the tabs that stick out of the bottom of the cube on the sides of the PCB that have components near the edge. Attach one side at a time to avoid clips from breaking
- One attached it is extremely difficult to remove without breaking the tabs

\*\*After you turn your off your board check out the glittery glow in the dark filament to truly see the real Tesseract!!!

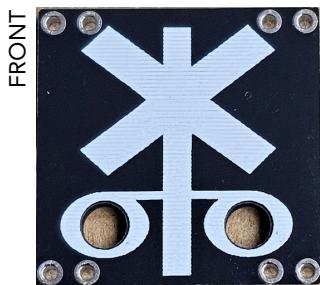

BOARD/LED TYPE:

PARTS USED:

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

Use single pad method to solder on surface mount components.

Attach 1206 SMD Resistor to the pads with the two lines.

Attach 1206 SMD LED to the pads with the box, green facing the inside of the box.

I strongly suggest adding a layer of hot glue across the back to improve the lightning on this one.

## Tung Tung Tung Sahur

Designed By: clintonjwalker

Tung Tung Tung Tung Tung Tung Tung Tung Sahur is a popular meme character in the Italian Brainrot community. Italian Brainrot characters are AI generated images of surreal, somewhat nonsensical cartoonish creatures with funny names. This is part of the current popular humor of Generation Alpha, which has a strong mix of absurdism and post-ironic tone. Sometimes the humor from the generation can be confusing since it may include saying random words or numbers, and they might not even know what it means. It doesn't really matter what Tung Tung Tung Sahur is, all that matters is skibidi toilet six seven or whatever.

## TerminalMan

Designed By: crax3513

Wanted to squeeze an ESP32 onto a minibadge to allow people to interact with it. Needed to make a 2x width size badge to fit an esp32-c3 mini. Setups a soft AP to allow a wifi connection to the badge(default AP: TMAN\_AP PW: SAINTCON) that can then be accessed in a browser at 192.168.4.1 that will pull up a webpage containing a terminal that allows you to type commands to do things like set and change colors of LEDs and other led animations.

DIFFICULTY:

ADVANCED

HOW DO I GET ONE?

Trade with me

RARITY:

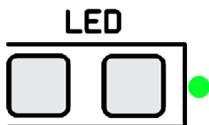

SUPER RARE

## ASSEMBLY INSTRUCTIONS:

Solder the 3x 2020 LEDs to the front. GND is the lower left corner in the 4 pad set for each LED. LED will have a green stripe or mark on the bottom which should go on the GND side. Next, solder the ESP32-C3 onto the pads on the underside of the board with the USB port of the ESP32 closest to the badge pins(USB port towards the left side of the board when looking at the bottom). Finally solder the two 6 pin pieces to the badge. Optional: Peel off cover and attach heatsink to ESP chip.

## DS\_Bonfire

Designed By: Crimzn\_C0mmitt

This badge is inspired by the bonfire from Dark Souls, which features flickering flames and a coiled sword. Come rest at the bonfire and find solace in the reminder to never go hollow. My budget was a little tight this year so I had to go with a through hole LED and resistor, but it is still a stunning badge. Remember no matter how hard life gets, don't you dare go hollow.

DIFFICULTY:

**BEGINNER**

RARITY:

## Compy 386

Designed By: GMoney

Always loved watching all of StrongBad's emails, so I wanted to create a badge that I felt tied into SaintCon.

DIFFICULTY:

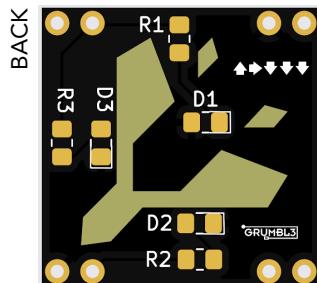

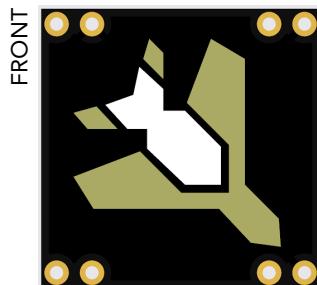

**BEGINNER**

HOW DO I GET ONE?

Trade preferably, or just come find me.

RARITY:

**RARE**

**ASSEMBLY INSTRUCTIONS:**

Green dot/mark fits in the white "cup" outlining one side of the diode spots (D1, D2, etc), while the resistors can be placed in any orientation.

# PERSONAL MINIBADGE

**500KG**

Designed By: grumbl3  
Up. Right. Down. Down. Down.  
Eagle One, never misses.

DIFFICULTY:

**INTERMEDIATE**

HOW DO I GET ONE?

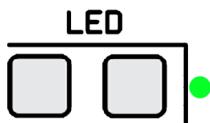

Come find and trade with me! Just ask for grumble.

RARITY:

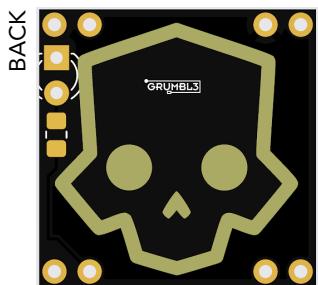

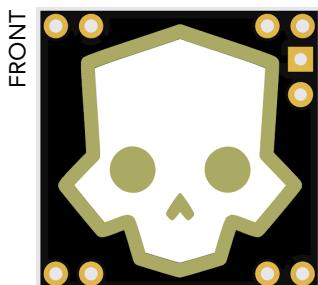

**SUPER RARE**

BOARD/LED TYPE:

PARTS USED:

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

Give the 3mm as much slack as you can. For the best lighting results (outside of the hot glue trick) you don't want the LED pressed up against back of the badge. Play around with it! Don't forget to match the orientation to the footprint on the board. Feel the LED for a flat spot that should match up to it!

BOARD/LED TYPE:

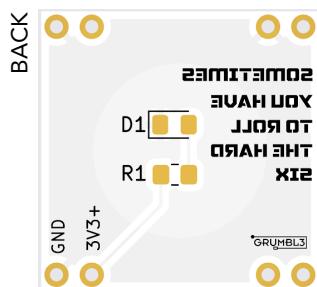

PARTS USED:

DIFFICULTY: **INTERMEDIATE**      HOW DO I GET ONE?  
Come and find me and trade! Ask around for grumble!

## PERSONAL MINIBADGE

### Sneetches

Designed By: hollyhacker

Inspired by Dr. Seuss's Sneetches and their tale of stars appearing and disappearing under the watchful eye of Mr. McMonkey McBean. In a playful nod to this "on again, off again" story, the design reflects the unpredictable nature of tariffs and trade decisions this year—sometimes on, sometimes off, much like the Sneetches' stars.

DIFFICULTY:

**BEGINNER**

RARITY:

**RARE**

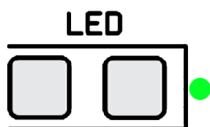

### HOW DO I GET ONE?

Find the big flashing hat and ask me for one. I can also be reached on discord to coordinate trades.

#### ASSEMBLY INSTRUCTIONS:

Standard pad soldering. Solder resistors to R markings and led's to D markings. Hotglue can enhance the lighting of this badge

BOARD/LED TYPE:

# PERSONAL MINIBADGE

## Smash Ball

Designed By: Hyper Shot

I am a big fan of the game Super Smash Bros. Ultimate and the whole series. So i made the logo of the franchise into a minibadge. I felt that many people who either enjoy the game or may have nostalgia for it may be interested in this minibadge.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Either trading with me or asking for it and I'll give it for free.

RARITY:

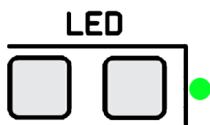

**RARE**

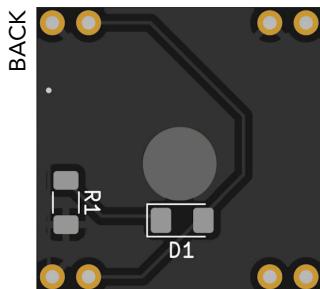

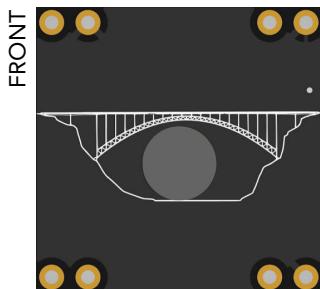

## ASSEMBLY INSTRUCTIONS:

- Begin on the back side first.
- Solder the LED, using the single-pad method for hand soldering.
- Solder the Resistor using the same single-pad method for hand soldering.
- Solder the 4x 2-Position headers, with artwork facing out.

BOARD/LED TYPE:

PARTS USED:

**ASSEMBLY INSTRUCTIONS:**

- Begin on the back side first.
- Solder the LED, using the single-pad method for hand soldering.
- Solder the Resistor using the same single-pad method for hand soldering.
- Solder the 4x 2-Position headers, with the bridge and sun facing out.

# PERSONAL MINIBADGE

## Perrine Bridge

Designed By: Hyper Shot

The Perrine Bridge is one of the main landmarks where I live in Twin Falls Idaho. I've always thought it looked cool and beautiful so I made it into a minibadge. People who may live here as well or know about the bridge might want it.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

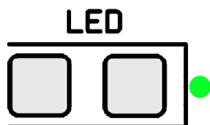

You can either trade with me or ask and I'll give for free.

RARITY:

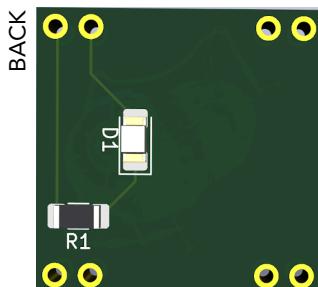

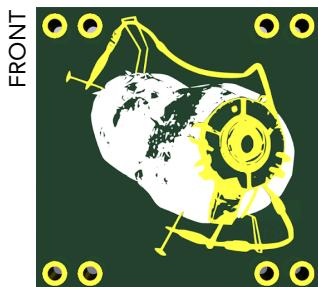

**RARE**

BOARD/LED TYPE:

PARTS USED:

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

Assembly is fairly standard. There are 8 pins, 1 SMD LED, and 1 SMD resistor

## Potato Glados

Designed By: Josh Jolley  
Potato Glados from Portal 2

DIFFICULTY:

**BEGINNER**

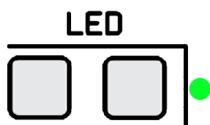

RARITY:

**RARE**

## HOW DO I GET ONE?

I love collecting cool badges, so I'm happy to trade for cool ones!

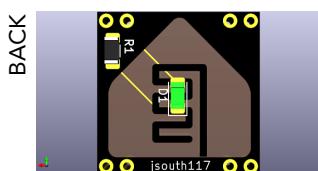

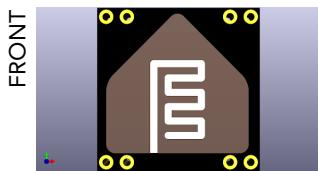

BOARD/LED TYPE:

PARTS USED:

Badge, 1206\_SMD\_LED, 1206\_SMD\_resistor, 8 pins

# PERSONAL MINIBADGE

## ESPHome Badge

Designed By: jsouth117

Following my Home Assistant mini badge last year is another important tool in my home automation - ESPHome. This mini badge is inspired by the logo. Unfortunately, this mini badge does not run ESPHome code... maybe next year?

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Trade with me

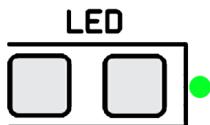

RARITY:

**RARE**

### ASSEMBLY INSTRUCTIONS:

Solder the resistor to R1 and the led to D1 (I would recommend putting the led in upside down for a brighter glow). Solder the pin headers. Optional - Add hot glue to the back over the led to diffuse the light.

BOARD/LED TYPE:

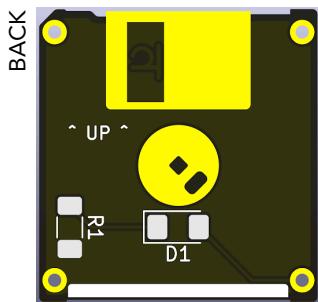

PARTS USED:

SMD resistor  
SMD blue LED

BOARD HOUSE USED:  
JLBPCB

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

- Begin on the back side first.
- Solder the LED(s) first, using the single-pad method for hand soldering.
- Solder the Resistor(s) using the same single-pad method for hand soldering.
- Solder the 2-Position headers.

## Berly Old Skool MiniBadge

Designed By: Jup1t3r

3.5-inch floppy disk: because in the '90s, 1.44 megabytes was all you needed to change the world—or at least save 1 dos game, or 3 bmp images.

### Troll

Designed By: kittysedai

Inspired by the unstoppable 90's troll phenomenon, this badge brings back the days when life's biggest decisions were which Lisa Frank sticker to use on your trapper keeper and whether to rub your troll's belly gem before a test. Back then, these little icons were everywhere, on pencils, in lunchboxes, and taped inside lockers, and now, thanks to SaintCon and a soldering iron, you can build your own and relive a bit of that magic. Just be warned... once assembled, you might catch yourself rubbing its belly for good luck.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Trade with me or ask for one

RARITY:

**SUPER RARE**

### ASSEMBLY INSTRUCTIONS:

1. Solder the through-hole LEDs to the D1 & D2 SMD pads
  - a. Point the LEDs towards the top of the badge
  - b. The short leg goes inside the box
  - c. Place the LEDs upwards so the LEDs shows in the no solder mask area
  - d. Trim excess legs
2. Solder the resistor(s) using the single-pad method for hand soldering.
3. Solder the Pin Headers to the Badge.

BOARD/LED TYPE:

PARTS USED:

3mm RGB Multicolor Fast Blinking LED (2), 1206 RESISTOR 75 OHM (2), Male Header Pins (4), FR-4 PCB Board (1)

BOARD HOUSE USED:

JLCPCB

## PERSONAL MINIBADGE

### New Achievement

Designed By: kittysedai

Inspired by the hilariously chaotic world of Dungeon Crawler Carl, this minibadge celebrates the moment you earn your place among the crafty (and slightly unhinged). You get it by conquering the trials of soldering, wrangling header pins, chasing down rogue resistors, and sticking LEDs in the right way without burning yourself.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Trade with me or ask for one

RARITY:

**SUPER RARE**

#### ASSEMBLY INSTRUCTIONS:

1. Solder the through-hole LED to the D1 SMD pad
  - a. Point the LED towards the bottom of the badge
  - b. The short leg goes inside the box
  - c. Bend the LED upwards so the LED shows in the no solder mask area
  - d. Trim excess legs
2. Solder the resistor(s) using the single-pad method for hand soldering.
3. Solder the Pin Headers to the Badge.

TY

Designed By: kittysedai

If you lived through the 90s, you know this heart and you probably still have a few (or a hundred) Beanie Babies stashed in a bin somewhere "because they'll be worth something someday." Back then, the TY heart meant you weren't just buying a stuffed animal, you were making an investment (or so we told ourselves). Now it's just a fun piece of history, immortalized in PCB form, no plastic tag protector required.

Designed By: kittysedai / atticus  
Last year's badge featured the full-size Stanley tumbler in all its glory, this year, it's gone fun-size. This minibadge was designed as a nod to the drinkware that somehow became both a hydration tool and a cultural phenomenon. Whether you actually use yours for water or for a suspicious amount of Diet Coke, this tiny version keeps the tradition going without the risk of denting your toes if you drop it. Perfect for those who believe no outfit (or badge) is complete without a Stanley.

Collect all 4! For purple and white see kittysedai for black or blue see atticus

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

### \*\*LEDs:\*\*

There are two LEDs located on the MiniBadge—one near the top center and the other on the bottom left. They are labeled D1 and D2. Each LED is marked with either a green dot or a line on one side, which should be oriented towards the inside of the border.

### \*\*Resistors:\*\*

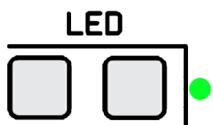

There are two resistors that need to be soldered to positions R1 and R2. These resistors can be soldered in either orientation.

### \*\*To Blink or Not To Blink\*\*

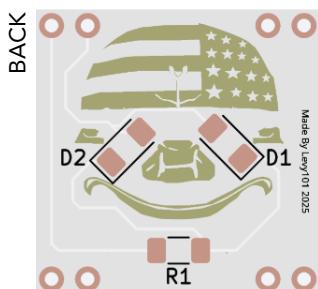

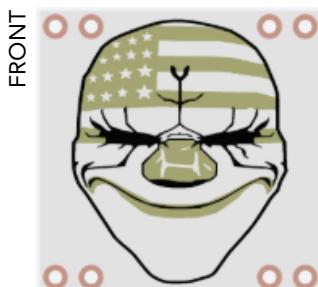

There is a pad on the right hand side of the MineBadge. Soldering the center and left pad will keep the LEDs from blinking. Soldering the center and right pad will make the LEDs blink.

Big cat from Kpop Demon Hunters

DIFFICULTY:

**INTERMEDIATE**

HOW DO I GET ONE?

Tell me the airspeed velocity of an unladen swallow.

RARITY:

**UNCOMMON**

## ASSEMBLY INSTRUCTIONS:

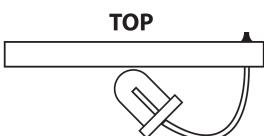

The LEDs have flat tops and are meant to be inserted into the board from the back. They should be flush with the front of the board. This provides a place to stick the googly eyes.

There are two sizes of googly eyes included. The larger ones are self-adhesive so you can just stick them on. The smaller ones look better (in my opinion) but they have to be glued on.

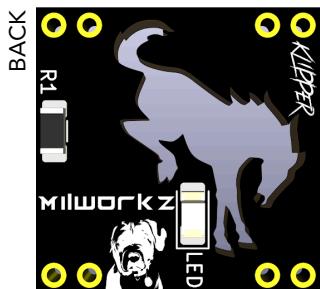

The LED leads go into the 4 center holes on the bottom row. They act as Derpy's claws on the front of the board. NOTE: You may have to bend the LED leads if they interfere with the minibadge slot headers.

BOARD/LED TYPE:

PARTS USED:

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

This comes with a 3mm led that needs to be soldered on to the front and bended to the back to light this board. Yes, the board design will be backwards as it was designed to be a cube and not a standalone badge. No, the badge cannot be flipped around as that would put the pins in the clock pins.

## Failed Cube

Designed By: Moomoo

When procrastination, limited time, and no previous testing come together as one, you end up with one of these. This was meant to be fitted together to make a cube from Mario. However, one side was too short and will only make a cube with great effort and it'll still look bad. This design was fixed in later versions, but these boards are available.

## PERSONAL MINIBADGE

### VW dreams

Designed By: PB&J

This badge was inspired by the memory of former neighbors' VWs - one had a Beetle the other a Transporter (Bus) - and by my long-time desire to own a VW-powered Dune Buggy. This is part of my "Fast Food & Cars" theme for this year.

I was torn between trying to re-create the 'Tomato Soup' red of the bus and the Sky-blue of the 'Bug' for the colors of this mini badge, but due to the difficulty in getting LED & solder mask colors just right, the blue won out.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

## Arby's - Red

Designed By: PB&J

My 2nd design in my 'Fast food & Cars' collection is from a fast food chain that's an oldie but a goodie. Since this was so simple (compared to my first mini badge ever) I decided that I should make two versions! Unfortunately, rising costs force me to limit everyone to one design or the other, then again, who knows - I may be lucky to give half of them away! Anyway, I hope you enjoy!

DIFFICULTY:

**BEGINNER**

RARITY:

**SUPER RARE**

## HOW DO I GET ONE?

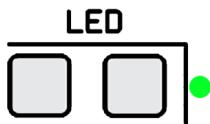

Trade me a slider, Gyro or other cheese-free sandwich from Arby's, or tell which sandwich is your fave to get one of these gems!

## ASSEMBLY INSTRUCTIONS:

Solder the resistor (one pad at a time), then the LED, then the pins. Covering the LED and bare PCB areas on the back with hot glue will help spread-out the color on the front.

FRONT

BMW

Designed By: PB&amp;J

The design of this badge is based on the looks, as well as the ease of re-creating the logo (try creating a Cadillac logo mini badge & you'll see what I mean). For those who don't know, BMW started out as an airplane engine manufacturing company, hence the spinning prop look of the logo. This design rounds-out my "Fast food & Cars" car logos badges for this year.

#### ASSEMBLY INSTRUCTIONS:

Solder LED and resistor. Solder pin headers.

BOARD/LED TYPE:

PARTS USED:

FRONT

BACK

#### ASSEMBLY INSTRUCTIONS:

First, solder all of the LEDs and resistors. If you are missing R1 (a potentiometer), simply bridge the pad that says "NO R1" with solder. The potentiometer is meant for volume control. Next, solder the buzzer on the back of the badge, then with some good cutters, snip the leads of the speaker as flush as you can get them. After that, solder the comically large button on the front.

## PERSONAL MINIBADGE

### BEEP BEEP

Designed By: Pips

An obnoxiously-loud buzzer with an obnoxiously bright and large button. How tempting! Who wouldn't want to press that? Due to the length of the buzzer, the minibadge needs extra-long pin headers to connect snug with the socket.

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

I always recommend starting with the smallest components first, so the resistor, then the LED, then solder the header pins. The LED might be a bit tricky. It is a through-hole LED that is intended to be soldered on the SMD pads. You will want to carefully bend the legs of the LED so that the bulb is pointing at the back of the badge, then trim the legs.

## Blooming Flower

Designed By: Z3ThunderKitty

This wonderful flower has a beautiful glowing leaf pattern with a stunning 3D effect.

DIFFICULTY:

**BEGINNER**

RARITY:

**RARE**

HOW DO I GET ONE?

Find Z3ThunderKitty to trade for it.

### ASSEMBLY INSTRUCTIONS:

- Begin on the back side first.- LED Direction indicators are on the images.
- Solder the two Green LEDs first, D1 and D2. Solder two Resistors. 51ohm, R1and R2 for Green LED
- Solder one Resistor. 100ohm, R3 for Yellow LED
- Solder the 4x 2-Position headers, yes, do this before the throughhole LED
- If necessary, carefully remove the flower from the excess material.
- Put the leads of the LED through the center of the flower
- The Short Lead of the LED goes into the hole with the round pad.
- ( Note: THIS IS NOT THE STANDARD ORIENTATION! )

BOARD/LED TYPE:

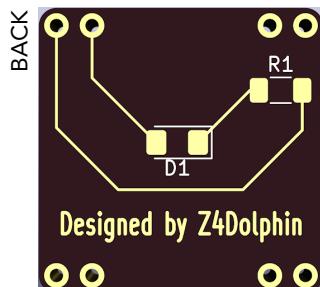

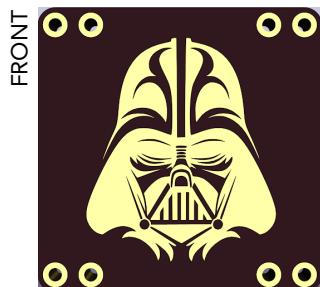

PARTS USED:

2x 1206 SMD Green LED  
2x 1206 51 ohm resistor  
1x 3mm Throughhole Yellow LED  
1x 1206 100 ohm resistor

BOARD HOUSE USED:

JLCPCB

# PERSONAL MINIBADGE

## ASSEMBLY INSTRUCTIONS:

- Solder the LED
- Solder the Resistor
- Solder the 4x 2-Position headers

## My Minibadge

Designed By: Z4Dolphin

This minibadge is designed fully by a 10 year old. He did the art, the schematic, and the board design all himself.

DIFFICULTY:

**BEGINNER**

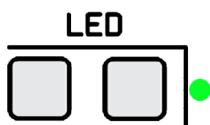

RARITY:

**SUPER RARE**

## HOW DO I GET ONE?

To get it, record an audio message to tell him how cool you think his minibadge is. Find TGalvez to share it.

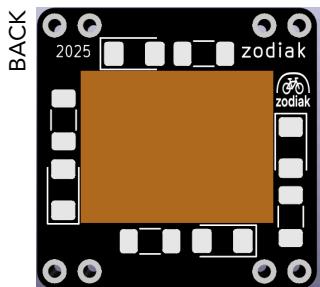

BOARD/LED TYPE:

PARTS USED:

1x 1206 SMD Red LED  
1x 1206 51 ohm resistor

BOARD HOUSE USED:  
JLCPCB

#### ASSEMBLY INSTRUCTIONS:

Straight forward. Put the LEDs where LEDs go. Resistors where resistors go. Pins where pins go. Or you can trade the LEDs and resistors to trigger the OCD of your neighbors.....

It's a sunset, so put the colors in the order that makes sense to you. It's your minibadge now though, so arrange them however you want.

## PERSONAL MINIBADGE

Smile. Ride a bike.

Designed By: zodiak

Quick reminder that life is better on 2 wheels.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Find zodiak. Tell a story about a bike. Or say hi. Or whatever honestly.

RARITY:

Please scan me with your enterprise device.

Designed By: zodiak

Marv wanted a minibadge. I thought I had time. It made it to the conference, so I think we all won.

DIFFICULTY:

**BEGINNER**

RARITY:

**UNCOMMON**

HOW DO I GET ONE?

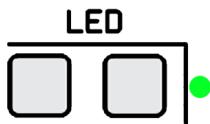

Find marvthe grate. Tell him about your favorite keyboard switch. There is a right and a wrong answer (Hint: It is definitely Cherry MX Browns).

## ASSEMBLY INSTRUCTIONS:

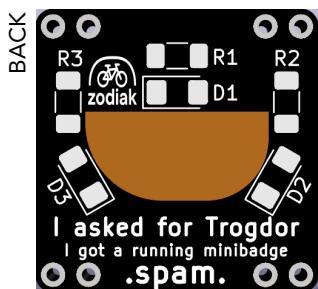

As long as the LEDs and resistors are paired up and oriented correctly, you will get lights.

BOARD/LED TYPE:

PARTS USED:

# PERSONAL MINIBADGE

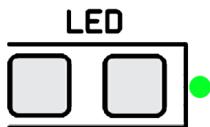

## ASSEMBLY INSTRUCTIONS:

To begin the precise and sequential process of installing three 1206 resistors, one must first identify and verify each component against the schematic, confirming that all markings correspond exactly. Only then should the substrate be prepared, inspecting copper pads for debris or oxidation that could impair soldering. Apply solder paste in a quantity sufficient for reliable contact, yet restrained enough to avoid bridging, using a stencil, syringe, or similarly exacting tool. With the paste in place, position the resistors deliberately—perhaps left to right—ensuring proper alignment before transferring the assembly to a reflow environment. After successful reflow and cooling, repeat the same methodical procedure for three 1206 LEDs—verifying polarity, preparing pads, applying paste, aligning, and reflowing—all executed with an attention to detail verging on ritual. Finally, insert four two-pin headers, ensuring proper alignment with through-holes and avoiding angular stress.

BOARD/LED TYPE:

DIFFICULTY:  
**BEGINNER**

HOW DO I GET ONE?  
Find spam. Tell him he should stop running and ride more bikes.

RARITY:  
**UNCOMMON**

## PERSONAL MINIBADGE

### Here to Learn Stuff

Designed By: zodiak

Ls wanted to make her first minibadge. She designed everything. It pretty awesome. Super proud of her.

DIFFICULTY:

**BEGINNER**

RARITY:

**UNCOMMON**

### HOW DO I GET ONE?

Find zodiak or spam. Trade something to tell Ls thanks for her effort designing things. Can be a minibadge, a sticker, a story, or anything cool really.

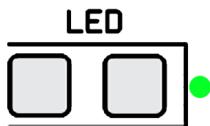

If you're around Friday, find Ls and tell her just how awesome the minibadge is.

### ASSEMBLY INSTRUCTIONS:

Resistors go between the bars. Green of the LED goes inside the garage. Looks best with hot glue.

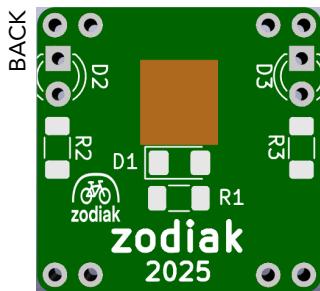

BOARD/LED TYPE:

PARTS USED:

## PERSONAL MINIBADGE

### ASSEMBLY INSTRUCTIONS:

Bend the through hole LEDs into a rainbow. The short leg goes into the square hole. point the tip of the minibadge at the square in the back of the minibadge. It's a fire. Variety is good. Point it where you want, move them around. See what looks good to you. Do that.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Find zodiak. He likes stories about dumpster fires. It can be yours, his, or somebody else's.

RARITY:

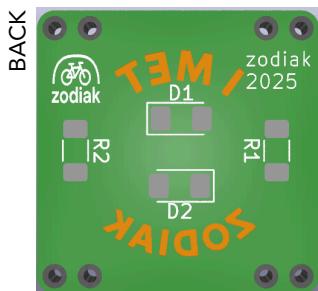

**UNCOMMON**

BOARD/LED TYPE:

PARTS USED:

# PERSONAL MINIBADGE

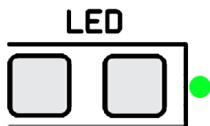

## ASSEMBLY INSTRUCTIONS:

Put the LEDs and resistors on the board. They light up when connected to a power source. Everybody wins.

BOARD/LED TYPE:

PARTS USED:

I Met zodiak!

Designed By: zodiak

SAINTCON is about meeting people. The biggest benefit you can get is the people you meet. This minibadge is to remind you to take the time to meet new people.

DIFFICULTY:

**BEGINNER**

HOW DO I GET ONE?

Walk up to zodiak. Say: "Hi! I'm <insert name here>."

RARITY:
